

Malik Danab

Junior Gameplay Programmer | Email: mtd.danab@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Junior Gameplay Programmer focusing on C# and C++ systems architecture, ECS frameworks, and content authoring pipelines. Demonstrated experience shipping full games on solo and team projects, with a focus on scalable subsystems for combat, AI, pathfinding, and progression.

GAME PROJECTS

Foursight (Unity 6, C#, DOTS / ECS) Solo Developer

[RELEASED ON ITCH.IO](#)

- Architected a Data Oriented Technology Stack (DOTS / ECS) simulation core processing towers, enemies, combat, and pathfinding as independently scheduled Burst-compiled systems.
- Designed a backwards Dijkstra flow field pathfinder that rebuilds dynamically as towers are placed or destroyed, using per-tower break costs to produce emergent group attack behavior.
- Built a bridge layer between the DOTS simulation and a MonoBehaviour presentation layer, using static C# events to drive companion GameObjects, audio, and a custom sprite animation pipeline from Burst code.
- Engineered a data-driven card system with a keyword chain executor backed by ScriptableObject definitions, enabling new cards and effects to be authored entirely from the Inspector.

InVein (Unreal Engine 5, C++) Gameplay and Sound Programmer

[RELEASED ON STEAM](#)

- Built and integrated the radio and dynamic sound system that drives atmospheric tension and reactive audio cues in a psychological horror setting.
- Programmed gamma correction and rendering stability features to maintain visual consistency across hardware configurations.
- Performed deep debugging across reality-shifting sequences, isolating performance and state synchronization issues during the game's most complex gameplay moments.

FinalPrice Chrome Extension (HTML, JavaScript) Sole Developer

[PUBLISHED](#)

- Developed a browser extension to automatically detect e-commerce prices and calculate after-tax totals.

EXPERIENCE

Telestream Sherpa Engineering Intern , May 2022 – August 2022

- Developed and maintained .NET applications and SQL databases for video conferencing software, diagnosing performance issues alongside senior engineers and shipping fixes into production.

TECHNICAL STACK

languages: C #, C++, Java, Python, HTML, Lua

engines/tools: Unreal Engine 5, Unity, GameMaker, Houdini, Git, Perforce, Maya, Rhino 5, Aseprite

pipelines/ecosystems: .NET, SQL, Adobe Suite

EDUCATION

The University of Texas at Dallas Graduated May 2025

B.A. Arts, Technology, and Emerging Communication
Concentration: Animation and Game Design

AWARDS & LEADERSHIP

1st Place, AIS UTD Build & Pitch Hackathon

Built a functioning prototype and successfully pitched the mechanics and business case under a tight deadline.

President, Magic: The Gathering Club at UTD

Managed external vendor relations and club funds and oversaw the scheduling and execution of weekly draft and game night events.
